High-performance valve for high-demanding industries

**Bidirectional** tightness

PTFE seat for high-temperature working settings **Split body** 

www.abovalve.com

# **GENERAL DESCRIPTION**

# Bidirectional bubble-tight concentric butterfly valves of Series 500 with PTFE sealing are offered for very clean manufacturig environments and are used in various industries like:

- pure industrial water treatment
- chemical industry (acids, alkalines)
- pharmaceutical/sanitary industry
- food and beverage industry
- paper industry
- pulp processing
- corrosive, toxic and caustic media
- production of chlorine
- dyes manufacturing and processing

### **Basic properties**

- concentric design
- bi-directional valve
- compact PTFE "TRIM" (stem, disc, pivot)
- 3 mm PTFE coated disc
- ATEX design, version 588: disc provided with 3mm layer of conductive PTFE (contains graphite to improve conductivity)
- possible both vertical and horizontal pipe mounting
- fully tight in shut position
- suitable as shut-off and control valve
- easy installation
- actuating stem sealing prevents media leaking to environs
- extended neck design allows for piping insulation and enables easy access for actuator mounting
- steel PTFE impregnated bearings provide exact support of stem and pivot
- top flange according to standard EN ISO 5211 enables variable control by means of various actuator types
- red epoxy coating acc. RAL 2002 80 μm (as a standard)

# Based on customers' particular requirements we offer

- WRAS certification for potable water
- ATEX design
- inspection certificate 3.1, 3.2

### **Valve coating**

- ABO offers epoxy coated valve bodies providing excellent abrasion and atmosphere corrosion resistance
- coating colour is red acc. RAL 2002, 80 µm thick
- upon request valve bodies can be provided with special coating f.e. C3, C4

### **Type designation**

5 9 9 B 100 NO

Nominal size
DN50 - Dn400

Body design

B - WAFER with through holes T - LUG with threaded holes

Seat material

8 - conductive PTFE

9 - PTFE

Disc material

- 8 duplex stainless steel 1.4469 conductive PFFE coated
- 9 duplex stainless steel 1.4469 PTFE coated
- 7 duplex stainless steel 1.4469 with polished edges

Series designation

Series 500

# **VALVE MODELS**

### **Valve actuation**

Handlever

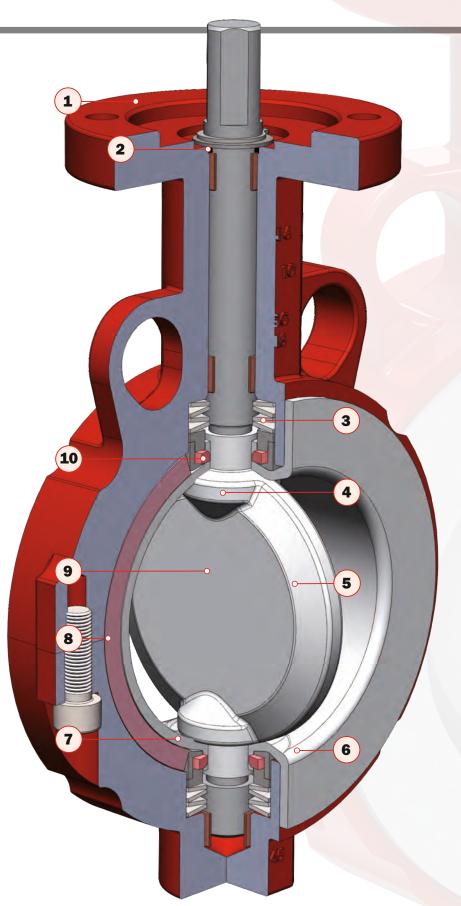

# **DESIGN ADVANTAGES**

### 1. Topflange

 according to standard ISO 5211 enables to directly assemble any type of actuator. Flange high neck enables to insulate the actuator on the ISO flange.

# 2. Protection from penetrating abrasive articles

 dust protection 0-ring protects stem and pivot bearings against entering abrasive articles.

### 3. Preloaded seal

 belleville washers in the valve neck ensure the seal presure to disc. Double seals on both stem/pivot are standard equipment.

### 4. Ball sealing priciple

 sealing surface of the teflone liner in the stem area has a defined ball geometry exactly reproducing the disc geometry. There are no critical transitions. Thus fluent and reliable operation is ensured.

### 5. Profiled disc

lower pressure drops and higher Kv values.

### 6. Teflon seat

with minimal thickness of 3 mm PTFE is manufactured by isostatic hot pressing.

### 7. Functional areas

 precise machining and exact alignment of the sealing components provides sealing around the stem in the functional areas.

### 8. Seatenergizer

 silicone energizer extends completely around the seat, including the disc hub providing uniform force for bubble-tight shutoff.

### 9. Disc/stem/pivot

 single-piece TRIM lined with PTFE coating thick at least 3 mm. All the sealing surfaces are machined.

### **10. Safety elements**

bushings with the silicone rings are compressed by the belleville springs washers during assembly. The silicone ring presses the edge of the seat, against the edge of the disc and around the stem. This ensures tightness and protects the inner seal of the valve against the media.

# **MATERIAL PERFORMANCE**

# ATEX DESIGN

# Czech Imustrial Valve Manufacturer Thus their long lifespan and valve quality stability are proexibility, low friction coefficient, low water absorption and

### **PTFE properties**

- the parts coming to contact with work media (seat, disc) are lined with PTFE. Thus their long lifespan and valve quality stability are provided. PTFE characteristics are high chemical resistance, toughness and flexibility, low friction coefficient, low water absorption and non-adhesiveness. All the mentioned properties provide increased protection against leakage of media. Low friction coefficient value reduces valve opening torque.
- excellent abrasion and corrosion resistance
- resistance to chemicals incl. strong acids and alkalines
- resistance to solvents, alcohols, greases and oils
- resistance to humidity and water

### **General features**

- Concentric design
- Compact PTFE "TRIM"
- 588: disc provided with 3 mm layer of conductive PTFE (to improve conductivity contains graphite)
- WAFER / LUG type (split body)
- Bi-directional valve
- Possible both vertical and horizontal pipe mounting
- Suitable as a closure and control valve
- Top flange according to standard ISO 5211
- PTFE coated steel bearings ensure accurate guidance of the top and bottom shaft
- Actuating stem sealing prevents media leaking to environs
- Easy asembly

## Maximum medium flow rate

	Maximum medium flow rate [m/s]								
PS [bar]	Liquid	Gas							
do 6	2,5	25							
6 < PS ≤ 10	3	30							

### Sea

- The seat is made of conductive Teflon (PTFE) and is pressed by a set of prestressed disc springs
- **Safety seals** on both shaft ends - ring made of silicone rubber which is pressed by set of springs

### **ATEX design**

- ATEX clamp (pos. No. 4) to which it is connected the lead wire is connected to the ATEX screw (No. 3) using hexagon nuts (No. 2) and two washers (No. 1)
- The ATEX screw is connected to the shut-off flap through the threaded hole into which it is screwed
- The tip of the ATEX screw is pressed in by means of a spring to the steel shaft and thanks to this spring the contact is constant and does not break

# **VALVE ACTUATION**

### Operating torgues (Nm) vs. working pressure (bar)

	DN	50	65	80	100	125	150	200	250	300	350	400
599	p <sub>max</sub> 10bar	35	40	60	95	140	190	250	435	660	850	1050
579*	p <sub>max</sub> 10bar	35	40	60	95	140	190	250	435	660	-	-

 $p_{\rm max}$  - maximum working pressure. For pressure of 10 bar (water at 20 °C). Torques are declared without safety factor. Recommended safety coefficient for the actuator installation is 1,3.

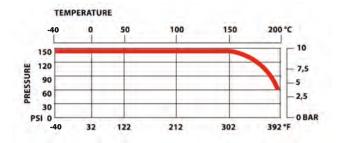

<sup>\*)</sup> series 579B are available only up to DN300

# **VALVE ACTUATION**

All ABO handlevers, manual worm-gear units, pneumatic or electric actuators can be mounted directly to ABO butterfly valves, which ensures compatibility between the actuator and the valve.

### **Handlever**

For manual actuation, company ABO valve offers handlevers in carbon steel material with protective coating for excellent corrosion, abrasion and impact resistance. A lever in stainless steel material is an option.

# **VALVE ACTUATION**

### **Actuators**

### **Pneumatic actuators**

ABO valves can be equipped with pneumatic actuators of two optional designs: single-action or double-action.

### **Electric actuators**

Electric actuators are designed quarter-turn. Electric actuators can be installed for voltages of 24 V, 230 V or  $400\,V$ .

### **Special actuator types**

Valves are equipped with special actuator types from major world suppliers (Auma, Regada, Valpes etc.).

ectric actuator

### **Quality control**

- manufacturing at ABO valve is certified according to quality control standard ISO 9001:2015 (14001, 45001)
- leak tests according to standards:
  - ČSN EN 12266-1, ISO 5208, ANSI/FCI 70-2
- production in accordance with the Pre-ssure Equipment Directive 2014/68/ EU-Equipment operating under pressure (Category III, module H)
- 3.1/3.2 inspection test certificates can be issued
- valve actuators, if delivered, are adjusted and tested while assembled
- all the certificates can be downloaded from www.abovalve.com
